

# BioAktiv for liquid manure

Brniště Agricultural Trading Cooperative, Czechia

**Area:** 3,200 m<sup>3</sup>, **Sediment:** 1,500 m<sup>3</sup> **Cost:** 50 kg 18,950 Kč

**Application:** First use on June 15, 2012, 25 kg dissolved in 18,000 l of water, repeated on July 4, 2012

Now the slurry pond can be pumped out right down to the bottom and fresh liquid manure may be topped up. The sediment which had accumulated over 8 years and reached a max. thickness of 1 m was dissolved in less than a month. A third application was therefore unnecessary also because the warm weather helped in the process.

Slurry pond checked on July 11, 2012
